Summary

DevOps Engineer with two years at TCS, focused on CI/CD, AWS automation, and making security checks a normal part of the developer workflow. Comfortable across Azure DevOps, Jenkins, Terraform, and AWS CDK, and just as comfortable supporting teams in production when a pipeline breaks.

Technical Skills

CI/CD & Version Control: Azure DevOps, Jenkins, Git, GitOps, ArgoCD

Cloud & IaC: AWS, Terraform, AWS CDK

AWS Services: S3, Lambda, Glue, IAM, Secrets Manager, EKS

Containers & Monitoring: Docker, Docker Compose, Kubernetes, Helm, Prometheus, Grafana

DevSecOps & Code Quality: SonarQube, Checkmarx, Checkov, Trivy, OWASP Dependency-Check, Linting

Scripting & Databases: Python, Bash (Linux Shell), MySQL

Experience

Tata Consultancy Services (TCS)

System Engineer

08/2024 – Present

Bengaluru, Karnataka

- Built a central CI/CD blueprint repository in Azure DevOps with reusable pipeline templates, now used by 12+ enterprise repositories and cutting setup time by 40%.
- Added security gates (Checkmarx, SonarQube, Checkov) and linters to CI, scanning only PR-changed files to cut scan times by 60%.
- Automated AWS deployments with AWS CDK (Lambda, Glue, IAM, S3) and used `aws s3 sync` for automated file deployments.
- Set up a hybrid delivery flow where Azure DevOps triggers downstream Jenkins jobs to deploy across multiple AWS environments.
- Wrote Python scripts and pipeline workflows to provision AWS Secrets Manager, securing credentials for 30+ cloud resources.
- Managed Azure DevOps repository governance with Terraform, enforcing branch policies and PR validations with 100% compliance.
- Provided production support for enterprise Jenkins pipelines, troubleshooting build, deployment, and configuration issues across teams.
- Onboarded 8+ application teams onto the standardized CI/CD platform while maintaining a 95%+ SLA.

Projects

Wanderlust: Production-Style DevSecOps Pipeline on AWS EKS github.com/Ibrahim-Naseef/wanderlust
Jenkins, Terraform, AWS EKS, Kubernetes, Helm, Prometheus, Grafana, SonarQube, Trivy

- Set up a delivery platform for a three-tier MERN application (React, Node.js, MongoDB, Redis), modeled on how a real team ships code from commit to a running cluster.
- Provisioned the AWS EKS cluster and worker nodes with Terraform, so the whole environment can be reviewed, created, and torn down from code instead of manual console setup.
- Built Jenkins CI/CD on a master-worker setup, where each run builds and pushes Docker images and runs security scans: OWASP Dependency-Check for vulnerable libraries, SonarQube for code quality, and Trivy for file system vulnerabilities.
- Deployed the frontend, backend, database, and Redis to EKS with Kubernetes manifests, using a Jenkins CD job to update image versions and ArgoCD to sync them to the cluster (GitOps).
- Installed Prometheus and Grafana on the cluster with Helm to watch node and pod health through dashboards, and added Jenkins email alerts so build failures reach the team right away.

Certifications

- AWS Certified DevOps Engineer – Professional
- AWS Certified Solutions Architect – Associate
- Microsoft Certified: Azure Developer Associate (AZ-204)
- Claude Certified Developer – Foundations (CCDV-F)

Education

Yenepoya Institute of Technology, B.E. in Computer Science (CGPA: 9.0)

2020 – 2024
